

Project Initialization and Planning Phase

Date	15th July 2026
Team ID	SWTID-2026-3798
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A meteorologist monitoring a flood-prone district	Predict flood risk early enough to issue evacuation advisories	Conventional forecasting methods often miss the right timing	Manual analysis of rainfall and cloud data is slow and error-prone	Anxious about delayed warnings costing lives

PS-2	A disaster relief coordinator managing multiple regions	Prioritize resource deployment during monsoon season	I can't get instant flood risk classifications for each area	Data from different regions is scattered and not centralized	Overwhelmed trying to make fast decisions with incomplete data
PS-3	A government analyst validating disaster preparedness systems	Confirm the reliability of a flood prediction model before deployment	I don't have an easy way to test model accuracy against historical events	There's no unified platform combining model outputs and past flood records	Uncertain about trusting the system for operational use
