

Date	15 July 2026
Team ID	SWTID-2026-3798
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

The AI-Powered Flood Prediction System helps predict flood risk using rainfall, river water level, and historical flood data. The system uses machine learning to provide early warnings so that people and authorities can take precautions before floods occur.

1. CUSTOMER SEGMENT(S) [CS] - Disaster Management Authorities - Government Agencies - Emergency Response Teams - Residents in Flood-Prone Areas	6. CUSTOMER LIMITATIONS - Lack of real-time information - Limited prediction accuracy - Delayed alerts	5. AVAILABLE SOLUTIONS - Traditional weather forecasting - Manual monitoring systems - Government warning systems
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - Delayed flood warnings - Property damage - Loss of lives - Inaccurate predictions	9. PROBLEM ROOT / CAUSE [RC] - Insufficient data analysis - Lack of integrated monitoring systems - Delayed decision-making	7. BEHAVIOR + ITS INTENSITY [BE] - Frequently checking weather updates - Following local news - Monitoring alerts
3. TRIGGERS TO ACT [TR] - Heavy rainfall - Rising river water levels - Extreme weather forecasts	10. YOUR SOLUTION [SL] - AI-powered flood prediction - Real-time monitoring - Early warning notifications - Risk assessment dashboard	8. CHANNELS OF BEHAVIOR [CH] ONLINE - Mobile Apps - Websites - SMS Alerts
4. EMOTIONS BEFORE / AFTER [EM] - Before: Fear, Anxiety, Uncertainty - After: Safety, Confidence, Preparedness		OFFLINE - Government Announcements - Community Warning Systems
