

## Initial Project Planning Template

|               |                                         |
|---------------|-----------------------------------------|
| Date          | 15 July 2026                            |
| Team ID       | SWTID-2026-3798                         |
| Project Name  | Rising Waters – Flood Prediction System |
| Maximum Marks | 5 Marks                                 |

### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create a product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                                              | Story Points | Priority | Team Members                                                  | Sprint Start Date | Sprint End Date (Planned) |
|----------|-------------------------------|-------------------|----------------------------------------------------------------------------------------------------------------|--------------|----------|---------------------------------------------------------------|-------------------|---------------------------|
| Sprint-1 | Data Preparation              | USN-1             | As a developer, I preprocess and clean the historical flood dataset for machine learning model training.       | 3            | High     | Sathwik Reddy, Nehasini Thota                                 | 01-07-2026        | 03-07-2026                |
| Sprint-1 | Exploratory Data Analysis     | USN-2             | As a developer, I analyze historical flood data to identify important features and patterns for prediction.    | 2            | High     | Yagna Sri Vayala                                              | 03-07-2026        | 04-07-2026                |
| Sprint-2 | Model Development             | USN-3             | As a developer, I train, evaluate, and save the XGBoost flood prediction model.                                | 5            | High     | Sathwik Reddy, Afshan Shaik                                   | 05-07-2026        | 07-07-2026                |
| Sprint-3 | Flask Backend Development     | USN-4             | As a user, I can submit weather parameters and receive flood prediction results through the Flask application. | 5            | High     | Nehasini Thota, Afshan Shaik                                  | 08-07-2026        | 10-07-2026                |
| Sprint-4 | Frontend & Deployment         | USN-5             | As a user, I can access a responsive web interface to predict flood risk and view prediction results.          | 4            | High     | Sathwik Reddy, Nehasini Thota, Yagna Sri Vayala, Afshan Shaik | 11-07-2026        | 15-07-2026                |
